Why the Nose for Systemic PBM?

The visible red photons diffuse into the permeable nasal blood capillary network and circulate throughout the body.

Vielight 633 Red (LED)

The Vielight 633 Red is a personal systemic intranasal photobiomodulation (PBM) LED-based device.

This device utilizes an LED to emit visible 633 nm (wavelength) red light. Each session is auto-timed for 25 minutes to deliver red light energy sufficient for a systemic effect on the body.

Vielight 655 Prime (LLL)

The Vielight 655 Prime is a compact laser-based intranasal PBM device. This device utilizes a low level laser (LLL) diode as a source of coherent visible red light with a wavelength of 655 nm. Each session is auto-timed for 25 minutes, delivering red light energy in a dose sufficient for a systemic effect.

Recommended Usage: Use on its own once a day. Can be used twice a day with a six-hour interval between the sessions. It can be used in combination with either the Vielight Neuro Alpha or Gamma devices, or 810 NIR device.

PBM Specifications: The LED in the nasal applicator of 633 Red emits 633 nm (wavelength) visible red light with power density of 7.6 mW/cm². The low level laser (LLL) diode in the nasal applicator of 655 Prime emits 655 nm (wavelength) visible red light with power density of 5 mW/cm².

Convenient Features: Compact and light, the 633 Red and the 655 Prime are designed for convenience and ease of use.

Multipurpose, battery-operated PBM device. One AA battery is required for operation. Each session is preset to last approximately 25 minutes. The device switches off automatically.

A clip on the back of the controller helps to keep the cord tidy.
