

X-PLUS 3 BODY & HEAD

Versatility & Reach

VIELIGHT
The Life Light®

A general wellness photobiomodulation device
Now with more portability and user simplicity

| www.vielight.com
| info@vielight.com

The X-Plus 3 is a versatile LED-based photobiomodulation (PBM) device. It allows the user to direct near-infrared (NIR) light to almost any location on the head (excluding the eyes[†]) using the X-Plus 3 HEAD unit, and different areas of the body using the X-Plus 3 BODY unit. Both units are included together in each X-Plus 3 set.

The larger LED module emits a continuous 810 nm wavelength NIR light. The NIR LED rests on an expandable and flexible steel band, allowing the X-Plus 3 units to fit different adult head sizes and body placements. PBM targeting the brain, the thymus gland, and the gut are some of the options with the X-Plus 3 HEAD and BODY units.

The X-Plus 3 nasal applicator has an LED emitting a 633 nm wavelength red light for intranasal PBM. It stimulates the circulatory system through the nasal cavity's dense capillary network.

The X-Plus 3 HEAD can be combined with the Vielight Neuro headsets to achieve a more holistic PBM effect. The X-Plus 3 HEAD delivers NIR to the back of the head, specifically the cerebellum, where the Neuro headsets do not reach. When used together, the X-Plus 3 HEAD and a Neuro can deliver NIR PBM to more areas of the brain.

Recommended Usage:

The X-Plus BODY or the HEAD can be used on its own once a day, up to six days per week. If combined with a Vielight Neuro Alpha or Gamma, it can be used once every two days.

PBM Specifications:

The nasal applicator emits a 633 nm wavelength, 6.5 mW visible red light.

The main LED module emits an 810 nm wavelength continuous (not pulsed) NIR light, 20 mW for the HEAD unit and 50 mW for the BODY unit.

Convenient Features:

Each session is preset to last about 20 minutes. The device switches off automatically.

The X-Plus 3 can be powered via a power bank or an electrical outlet.

Every X-Plus 3 package includes a portable power bank with USB connections.

The X-Plus 3 is a dual voltage device suitable for 110V and 220V power grids.
