About us

Non-Invasive Brain Stimulation Using Photobiomodulation

At Vielight, we revolutionize brain health with cutting-edge, non-invasive neurotechnology. Rooted in science, our red and near-infrared light therapy devices stimulate the brain transcranially and intranasally.

Your brain health made simple.

How it works

01. We shine 810 nm near-infrared (NIR) light from the Vielight on your head and nose.

02. The light passes through your hair, skin, and skull to reach your brain.

03. Inside the brain, there are neurons (the cells that help you think, learn, and feel).

04. Neurons have power plants in them called mitochondria, which make energy.

05. The mitochondria contain a special molecule called cytochrome c oxidase that helps produce energy.

- ↑ Increased ATP production
- ↑ Increased blood flow
- ↑ Increased neuroplasticity

Products

- Neuro Alpha 4
- Neuro Gamma 4
- Neuro Duo 4
- Vagus

The VA's Center for Compassionate Care Innovation (CCI) has successfully treated hundreds of Veterans with Traumatic Brain Injury with the Vielight Neuro.

Testimonials

“ MRI scans showed improved functional connectivity and oxygenation in specific networks in the brain. ”

WALL STREET JOURNAL

“ The Vielight device has eliminated my symptoms. My wife says I'm better than I've ever been. We thank Vielight for the technology that has given me my life back. ”
